Engineering (Software Development) Technical Track	02
Instructional Design/User Experience Design Technical Track	06
User Interface/Visual Design Technical Track	10
Graphics/Animation Technical Track	14
Quality Assurance Technical Track	18
Management Track (branching)	22

Engineering (Software Development)

Technical Track

Junior Software Engineer

Level: L1

Experience: 0 to 3 years

- Being responsible for daily execution and troubleshooting of assigned deliverables of programming by following the coding guidelines in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Attending client daily stand-up and coordinating on messaging systems/project management systems
- Coordinating with cross-functional teams for design and QA
- Checking and ensuring that product is developed as per design

Senior Software Engineer

Level: L2

Experience: 2 years to 6 years

- Being responsible for daily execution and troubleshooting of assigned deliverables of programming by following the coding guidelines in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Attending client daily stand-up and interfacing with clients via email and on conference calls to address requirements and technical queries/issues
- Coordinating with cross-functional teams for design and QA
- Checking and ensuring that product is developed as per design
- Assisting juniors in the team
- Scoping and estimating effort of specific product features
- Contributing to the assessment and feedback of juniors in the team

Module Lead, Engineering

Level: L3

Experience: 4 years to 9 years

- Being responsible for module code
- Developing module architecture
- Performing code reviews
- Automating elements
- Assigning, tracking and following-up of deliverables of module team
- Training juniors
- Contributing to the assessment and feedback of juniors in the team
- Conducting knowledge transfer sessions required for the project
- Facilitating solution deployment
- Following and suggesting changes/updates to processes
- Coordinating with cross-functional teams for design and QA
- Scoping and estimating effort of modules/small sized projects
- Scoping and estimating effort of modules/small sized projects

- Scoping and estimating effort of modules/small sized projects
- Corresponding with internal teams and clients via email and on conference calls to suggest, explain, and demonstrate features of deliverables, and resolve queries and provide clarifications as needed
- Being responsible for daily execution and troubleshooting of assigned deliverables of development by following the coding guidelines when necessary

Lead, Engineering (Technology Lead)

Level: L4

Experience: 6 years to 13 years

- Being responsible for team code
- Reviewing architecture developed by juniors
- Performing code reviews
- Guiding automation
- Scoping license terms for 3rd party libraries
- Analyzing RFPs and contributing to proposal creation
- Working closely with the project manager/solution architect and ensuring that all decisions are implemented
- Assigning, tracking and following-up of deliverables of overall team
- Creating training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Managing knowledge transfer sessions required for the project
- Facilitating solution deployment
- Suggesting improvements to processes
- Coordinating with cross-functional teams for design and QA
- Scoping and estimating effort of large sized projects
- Corresponding with clients

Solution Architect, Engineering

Level: L5

Experience: 8 years to 17 years

- Being responsible for project code for multiple projects
- Setting up technology of multiple projects
- Contributing to the development of proprietary Zeus IP and licensable technology solutions
- Periodic auditing of architecture
- Managing technology aspect of projects, ensuring scalability, security, and so on
- Providing technical input across different stages of the SDLC
- Checking technical feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors

- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients

Associate Manager, Engineering

Level: L6

Experience: 10 years to 21 years

Responsibilities are similar to those of Solution Architect Engineering but with additional experience.

- Being responsible for project code for multiple projects
- Setting up technology of multiple projects
- Contributing to the development of proprietary Zeus IP and licensable technology solutions
- Periodic auditing of architecture
- Managing technology aspect of projects, ensuring scalability, security, and so on
- Providing technical input across different stages of the SDLC
- Checking technical feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients

Manager, Engineering

Level: L7

Experience: 12 years to 26 years

- Evaluating and identifying appropriate technology platforms for projects
- Managing the technology of Zeus Products
- Contributing to the development of proprietary Zeus IP and licensable technology solutions
- Auditing technology aspect of projects with solution architect
- Discussing with Project Manager how to plan and implementing this into schedule
- Performing regular audits
- Performing end of project analysis for development
- Providing technical leadership, guidance and management
- Taking bottom-line responsibility for the Skill Center including recruitment, training and allocation of resources

Senior Manager, Engineering

Experience: 14 years onwards

Level: L8

Director

Level: L9

Senior Director

Level: L10

VP

Level: L11

Head

Level: L12

Instructional Design/User Experience Design

Technical Track

Junior ID/UXD Analyst

Level: **L1**

Experience: **0 to 3 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as concept development, ideation, storyboarding (ID), wireframing (UX), designing, and writing copy in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Understanding product specifications and user requirements
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design

Senior ID/UXD Analyst

Level: **L2**

Experience: **2 years to 6 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as concept development, ideation, storyboarding (ID), wireframing (UX), designing, and writing copy in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design
- Assisting juniors in team
- Scoping and estimating UX effort of specific product features
- Contributing to the assessment and feedback of juniors in the team

Module Lead, ID/ Associate Lead, UXD

Level: **L3**

Experience: **4 years to 9 years**

- Being responsible for module ID/UX design
- Interpreting client requirements, creating detailed instructional solutions and setting the stage for juniors to work on
- Checking and ensuring that product is developed as per design
- Assigning, tracking and following-up of deliverables of module team
- Training juniors
- Conducting knowledge transfer sessions required for the project
- Facilitating solution deployment
- Following and suggesting changes/updates to processes
- Coordinating with cross-functional teams for development and QA

- Scoping and estimating effort of modules/small sized projects
- Corresponding with internal teams and clients via email and on conference calls to suggest, explain, and demonstrate features of design deliverables, as well as resolve queries and provide clarifications as needed
- Being responsible for construction, execution and troubleshooting such as concept development, ideation, storyboarding (ID), wireframing (UX), designing, and writing copy when necessary

Lead, ID/UXD

Level: L4

Experience: 6 years to 13 years

- Being responsible for team ID/UX design
- Leveraging market research, customer insights and user analytics to drive design process
- Interpreting client requirements, creating detailed instructional solutions and setting the stage for juniors to work on
- Setting the strategy for implementation of instructional solutions
- Checking and ensuring that product is developed as per design
- Analyzing RFPs and contributing to proposal creation
- Working closely with the project manager/design architect and ensuring that all decisions are implemented
- Assigning, tracking and following-up of deliverables of overall team
- Creating training material for juniors
- Identifying and grooming juniors
- Managing knowledge transfer sessions required for the project
- Facilitating solution deployment
- Suggesting improvements to processes
- Coordinating with cross-functional teams for development and QA
- Scoping and estimating effort of large sized projects
- Corresponding with clients

Architect, ID/UXD

Level: L5

Experience: 8 years to 17 years

- Being responsible for project design for multiple projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Interacting with customers to clearly understand product requirements and vision
- Working with the team to prepare product design specification and integration documents
- Guiding solutions to complex problems
- Providing design input across different stages of the SDLC
- Checking design feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project

- Reviewing training material for juniors
- Identifying and grooming juniors
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients
- Staying updated on UX trends, best practices, design principles and tools/techniques and introducing them to the team members
- Conducting concept and usability testing and gathering feedback

Associate Manager, ID/UXD/Content

Level: L6

Experience: 10 years to 21 years

Responsibilities are similar to those of Architect ID/UXD but with additional experience.

- Being responsible for project design for multiple projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Interacting with customers to clearly understand product requirements and vision
- Working with the team to prepare product design specification and integration documents
- Guiding solutions to complex problems
- Providing design input across different stages of the SDLC
- Checking design feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients
- Staying updated on UX trends, best practices, design principles and tools/techniques and introducing them to the team members
- Conducting concept and usability testing and gathering feedback

Manager, ID/UXD/Content

Level: L7

Experience: 12 years to 26 years

- Evaluating and identifying appropriate design solutions for projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Defining processes
- Managing the entire design team, mapping the project needs and team members
- Performing regular audits
- Performing end of project analysis for design

- Providing design leadership, guidance and management
- Helping frame the problems so teams can come up with solutions
- Validating product designs, identifying constraints and providing corrective actions
- Taking bottom-line responsibility for the Skill Center
- Communicating with content strategists, product management, UX/UI, and engineering in product development

Senior Manager, ID/UXD/Content

Experience: 14 years onwards

Level: L8

Director

Level: L9

Senior Director

Level: L10

VP

Level: L11

Head

Level: L12

User Interface/Visual Design Technical Track

Junior UI/Visual Design Analyst

Level: **L1**

Experience: **0 to 3 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as UI/Visual Design in accordance with style guides and assigned timelines.
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Understanding product specifications and user requirements
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design

Senior UI/Visual Design Analyst

Level: **L2**

Experience: **2 years to 6 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as UI/Visual Design in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Conceptualizing ideas that bring simplicity and user friendliness to complex user flows
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design
- Assisting juniors in team
- Scoping and estimating UX effort of specific product features
- Contributing to the assessment and feedback of juniors in the team

Associate Lead, UI/Visual Design

Level: **L3**

Experience: **4 years to 9 years**

- Being responsible for module UI/Visual design
- Interpreting client requirements, creating detailed UI/Visual design solutions and setting the stage for juniors to work on
- Checking and ensuring that product is developed as per design
- Assigning, tracking and following-up of deliverables of module team
- Training juniors
- Contributing to the assessment and feedback of juniors in the team
- Conducting knowledge transfer sessions required for the project
- Facilitating solution deployment
- Following and suggesting changes/updates to processes
- Coordinating with cross-functional teams for development and QA

- Scoping and estimating effort of modules/small sized projects
- Corresponding with internal teams and clients via email and on conference calls to suggest, explain, and demonstrate features of design deliverables, as well as resolve queries and provide clarifications as needed
- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as UI/visual design

Lead, UI/Visual Design

Level: L4

Experience: 6 years to 13 years

- Being responsible for team UI/visual design
- Interpreting client requirements, creating detailed UI/visual design solutions and setting the stage for juniors to work on
- Setting the strategy for implementation of UI/visual solutions
- Checking and ensuring that product is developed as per design
- Analyzing RFPs and contributing to proposal creation
- Working closely with the project manager/design architect and ensuring that all decisions are implemented
- Assigning, tracking and following-up of deliverables of overall team
- Creating training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Managing knowledge transfer sessions required for the project
- Facilitating solution deployment
- Suggesting improvements to processes
- Coordinating with cross-functional teams for development and QA
- Scoping and estimating effort of large sized projects
- Corresponding with clients
- Mentoring juniors

Architect, UI/Visual Design

Level: L5

Experience: 8 years to 17 years

- Being responsible for project design for multiple projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Interacting with customers to clearly understand product requirements and vision
- Working with the team to prepare product design specification and integration documents
- Guiding solutions to complex problems
- Providing design input across different stages of the SDLC
- Checking design feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors

- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients
- Staying updated on UX trends, best practices, design principles and tools/techniques and introducing them to the team members

Associate Manager, UI/Visual Design

Level: L6

Experience: 10 years to 21 years

Responsibilities are similar to those of Design Architect (UI/visual) but with additional experience.

- Being responsible for project design for multiple projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Interacting with customers to clearly understand product requirements and vision
- Working with the team to prepare product design specification and integration documents
- Guiding solutions to complex problems
- Providing design input across different stages of the SDLC
- Checking design feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up of deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients
- Staying updated on UX trends, best practices, design principles and tools/techniques and introducing them to the team members

Manager, UI/Visual Design

Level: L7

Experience: 12 years to 26 years

- Working on multiple projects that require art, styles, animations, color, layout, typography
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Setting the overall look/style in each project
- Communicating with clients to understand their preferred artistic approach – clearly articulating design rationale and presenting persuasively
- Determining how best to represent a concept visually (troubleshooting)

- Directing others who develop artwork or layouts and ensuring that all artwork follows the same style within a project – accountable for successful conception and execution
- Reviewing and approving designs, artwork, and animations developed by the team
- Providing effort estimates

Senior Manager, UI/Visual Design

Experience: 14 years onwards

Level: L8

Director

Level: L9

Senior Director

Level: L10

VP

Level: L11

Head

Level: L12

Graphics/Animation Technical Track

Junior Graphics/ Animation Design Analyst

Level: **L1**

Experience: **0 to 3 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as Graphics/Animations as per style guide specifications in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Understanding product specifications and user requirements
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design

Senior Graphics/ Animation Design Analyst

Level: **L2**

Experience: **2 years to 6 years**

- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as Graphics/Animations in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Interacting with customers to discuss questions and presenting designs under the guidance of seniors
- Coordinating with cross-functional teams for development and QA
- Checking and ensuring that product is developed as per design
- Assisting juniors in team
- Scoping and estimating graphics/animation effort of product
- Contributing to the assessment and feedback of juniors in the team

Associate Lead, Graphics/Animation Design

Level: **L3**

Experience: **4 years to 9 years**

- Being responsible for module graphics/animation design
- Interpreting client requirements, creating detailed graphics/animation solutions and setting the stage for juniors to work on
- Checking and ensuring that product is developed as per design
- Assigning, tracking and following-up of deliverables of module team
- Training juniors
- Contributing to the assessment and feedback of juniors in the team
- Conducting knowledge transfer sessions required for the project
- Facilitating solution deployment
- Following and suggesting changes/updates to processes
- Coordinating with cross-functional teams for development and QA
- Scoping and estimating effort of modules/small sized projects

- Corresponding with internal teams and clients via email and on conference calls to suggest, explain, and demonstrate features of design deliverables, as well as resolve queries and provide clarifications as needed
- Being responsible for daily construction, execution and troubleshooting of assigned tasks such as Graphics/Animations

Lead, Graphics/ Animation Design

Level: L4

Experience: 6 years to 13 years

- Being responsible for team Graphics/Animations
- Interpreting client requirements, creating detailed Graphics/Animations solutions and setting the stage for juniors to work on
- Setting the strategy for implementation of Graphics/Animations solutions
- Checking and ensuring that product is developed as per design
- Analyzing RFPs and contributing to proposal creation
- Working closely with the project manager/design architect and ensuring that all decisions are implemented
- Assigning, tracking and following-up on deliverables of overall team
- Creating training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Managing knowledge transfer sessions required for the project
- Facilitating solution deployment
- Suggesting improvements to processes
- Coordinating with cross-functional teams for development and QA
- Scoping and estimating effort of large sized projects
- Corresponding with clients

Architect, Graphics/ Animation Design

Level: L5

Experience: 8 years to 17 years

- Being responsible for project design for multiple projects
- Contributing to the design of proprietary Zeus IP and licensable technology solutions
- Interacting with customers to clearly understand product requirements and vision
- Working with the team to prepare product design specification and integration documents

Level: L12

Quality Assurance Technical Track

Junior Quality Engineer

Level: L1

Experience: 0 to 3 years

- Being responsible for daily execution and troubleshooting of assigned deliverables such as writing test artifacts for small/simple components, testing the given system as per test case documents on multiple browsers and platforms, and logging issues in the bug tracking tool OR writing automation scripts in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Attending client daily stand-up and coordinating on messaging systems/project management systems
- Coordinating with cross-functional teams for design and development

Senior Quality Engineer

Level: L2

Experience: 2 years to 6 years

- Being responsible for daily execution and troubleshooting of assigned deliverables such as writing test artifacts for small/simple components, testing the given system as per test case documents on multiple browsers and platforms, and logging issues in the bug tracking tool OR writing automation scripts in accordance with assigned timelines
- Escalating to seniors any roadblocks in performing assigned tasks within timelines
- Performing a design review to ensure coverage of all possible cases of the project
- Attending client daily stand-up and interfacing with clients via email and on conference calls to address requirements and technical queries/issues
- Coordinating with cross-functional teams for design and development
- Assisting juniors in the team
- Scoping and estimating QA effort of specific product features
- Contributing to the assessment and feedback of juniors in the team

Module Lead, QA

Level: L3

Experience: 4 years to 9 years

- Being responsible for a module's QA
- Reviewing test artifacts and modules tested by team OR reviewing automation code
- Testing module integration OR writing the architecture for automation scripts
- Identifying areas for automation
- Working on QA reports and RCA for each delivery
- Assigning, tracking and following-up on deliverables of module team
- Training juniors
- Contributing to the assessment and feedback of juniors in the team
- Conducting knowledge transfer sessions required for the project

- Facilitating solution deployment
- Following and suggesting changes/updates to processes
- Coordinating with cross-functional teams for design and development
- Scoping and estimating QA effort of modules/small sized projects
- Corresponding with internal teams and clients via email and on conference calls to suggest, explain, and demonstrate features of design deliverables, as well as resolve queries and provide clarifications as needed
- Being responsible for daily execution and troubleshooting of assigned deliverables such as writing test artifacts for small/simple components, testing the given system as per test case documents on multiple browsers and platforms, and logging issues in the bug tracking tool OR writing automation scripts

Lead, QA

Level: L4

Experience: 6 years to 13 years

- Being responsible for the project's QA
- Reviewing test artifacts and modules tested by team
- Creating test plans for the projects
- Testing project integration
- Guiding automation
- Reviewing QA reports and RCA for each delivery
- Analyzing RFPs and contributing to proposal creation
- Working closely with the project manager/QA architect and ensuring that all decisions are implemented
- Assigning, tracking and following-up on deliverables of overall team
- Creating training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Managing knowledge transfer sessions required for the project
- Facilitating solution deployment
- Suggesting improvements to processes
- Coordinating with cross-functional teams for development and QA
- Scoping and estimating effort of large sized projects
- Corresponding with clients

Solution Architect, QA

Level: L5

Experience: 8 years to 17 years

- Being responsible for QA on multiple projects
- Contributing to the QA of proprietary Zeus IP and licensable technology solutions
- Introducing new QA trends and tools for the team
- Reviewing test plans of multiple projects
- Performing periodic audit
- Providing QA input across different stages of the SDLC
- Checking QA feasibility and identifying smart ways to meet requirements

- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up on deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients

Associate Manager, QA

Level: L6

Experience: 10 years to
21 years

Responsibilities are similar to those of Solution Architect Quality Engineering but with additional experience.

- Being responsible for QA on multiple projects
- Contributing to the QA of proprietary Zeus IP and licensable technology solutions
- Introducing new QA trends and tools for the team
- Reviewing test plans of multiple projects
- Performing periodic audit
- Providing QA input across different stages of the SDLC
- Checking QA feasibility and identifying smart ways to meet requirements
- Driving demo development and presentation
- Analyzing RFPs and writing proposals and business cases
- Scoping and estimating effort of large sized projects
- Assigning, tracking and following-up on deliverables of overall project
- Reviewing training material for juniors
- Identifying and grooming juniors
- Contributing to the assessment and feedback of juniors in the team
- Facilitating solution deployment
- Capturing improvements to processes
- Corresponding with clients

Manager, QA

Level: L7

Experience: 12 years to
26 years

- Auditing QA aspect of projects with solution architect
- Contributing to the QA of proprietary Zeus IP and licensable technology solutions
- Defining processes at team level
- Managing the entire QA team, mapping the project needs and team members
- Performing end of project analysis for QA
- Providing QA leadership, guidance and management
- Taking bottom-line responsibility for the Skill Center
- Taking responsibility for the overall growth of the team

- Being responsible for team management, work allocation, coordinating with internal stakeholders and at times with the external customers
- Developing best practices and technologies for project execution and management

Senior Manager, QA

Experience: 14 years onwards

Level: L8

Director

Level: L9

Senior Director

Level: L10

VP

Level: L11

Head

Level: L12

Management Track (branching)

Team Lead/Project Coordinator

Level: L4

Experience: 6 years to 13 years

- Being responsible for one project at one time
- Understanding project work at a detailed level
- Setting up project based on plan created by Project Manager
- Tracking progress by creating tickets and managing progress
- Being responsible for assignment for overall project tasks
- Managing operational targets for individual team members
- Providing guidance where necessary
- Communicating with cross-functional teams and making sure everyone is on the same page
- Communicating with clients
- Escalating issues and involving managers where necessary
- Identifying change requests and escalating
- Resolving conflicts
- Creating all project related documentation and getting development, design and QA teams to maintain all necessary documentation
- Soft skills: People management
- Contributing to the assessment and feedback of members in the team

Project Lead

Level: L5

Experience: 8 years to 17 years

- Being responsible for multiple projects at one time
- Contributing to the management of proprietary Zeus IP and licensable technology solutions
- Understanding project work at a detailed level
- Setting up project based on plan created by Project Manager
- Tracking progress by creating tickets and managing progress
- Being responsible for assignment for overall project tasks
- Managing operational targets for individual team members
- Removing roadblocks and encouraging innovative solutions
- Providing guidance where necessary
- Communicating with cross-functional teams and making sure everyone is on the same page
- Communicating with clients
- Escalating issues and involving managers where necessary
- Identifying change requests and escalating
- Resolving conflicts
- Creating all project related documentation and getting development, design and QA teams to maintain all necessary documentation
- Soft skills: People management
- Contributing to the assessment and feedback of members in the team

Associate Project Manager

Level: L6

Experience: 10 years to 21 years

Responsibilities are similar to those of Project Lead but with additional experience.

- Being responsible for multiple projects at one time or one large scale project
- Contributing to the management of proprietary Zeus IP and licensable technology solutions
- Understanding project work at a detailed level
- Setting up project based on plan created by Project Manager
- Tracking progress by creating tickets and managing progress
- Being responsible for assignment for overall project tasks
- Managing operational targets for individual team members
- Removing roadblocks and encouraging innovative solutions
- Providing guidance where necessary
- Communicating with cross-functional teams and making sure everyone is on the same page
- Communicating with clients
- Escalating issues and involving managers where necessary
- Identifying change requests and escalating
- Resolving conflicts
- Creating all project related documentation and getting development, design and QA teams to maintain all necessary documentation
- Soft skills: People management
- Contributing to the assessment and feedback of members in the team

Project Manager

Level: L7

Experience: 12 years to 26 years

- Taking bottom-line responsibility for the project
- Building the project team
- Carrying out Initiation, Planning, Implementation, Monitoring and Closing of Project with assistance of project leads, IT Managers and QA Managers
- Preparing an agenda, project implementation plan, and schedule with project leads and team members
- Being able to track, identify, address issues
- Reviewing progress, mitigating risk, and ensuring successful delivery and implementation
- Taking ownership of project and its performance
- Handling Accounts and taking bottom line responsibility of client satisfaction
- Being responsible for business analysis of RFPs, discussion with project leads and other managers to come up with Proposal and Pricing
- Identifying new opportunities and business leads that may come up during the course of a project and escalate to Directors
- Contributing to the management of proprietary Zeus IP and licensable technology solutions

Senior Project Manager

Experience: 14 years onwards

Level: L8
